Maximum Marks	2 Marks

Customer Journey Map

Map out the customer's experience stage-by-stage, capturing their actions, touchpoints, thoughts, and feelings, along with process ownership and improvement opportunities at each stage.

Phase of Journey	Stage 1: Registration & Loan Setup	Stage 2: Financial Assessment	Stage 3: AI Negotiation & Settlement
Actions <i>What does the customer do?</i>	- Registers an account and enters monthly income/expenses. - Adds loan details — lender, EMI, outstanding balance, overdue months. - Submits the loan form and waits for a result.	- Opens the financial health dashboard. - Reviews EMI ratio, DTI ratio, monthly surplus, and health score. - Checks the settlement prediction generated for each loan.	- Clicks “Negotiate” on a loan needing attention. - Reads the AI-generated negotiation strategy and letter. - Copies or sends the letter to the lender.
Touchpoint <i>What part of the service do they interact with?</i>	- Registration form (React frontend). - Loan entry form. - FastAPI backend — /auth/register, /loans endpoints.	- Financial profile dashboard page. - Recovery gauge (financial health score visual). - Settlement predictions list.	- AI negotiation page. - Gemini-powered negotiation service (with rule-based fallback). - AI activity history log.
Customer Thought <i>What is the customer thinking?</i>	“I hope this actually understands my situation.” “Is my financial data safe here?” “This was quicker than I expected.”	“Is my debt really this serious?” “What settlement amount is realistic for me?” “At least now I can see the numbers clearly.”	“Will this letter actually work with my lender?” “This sounds a lot more professional than I could write.” “I finally have a concrete next step.”
Customer Feeling <i>What is the customer feeling?</i>	- Hopeful but a little anxious sharing financial details. - Cautiously optimistic about getting help. - Relieved the setup was simple.	- Nervous seeing a high stress level or low health score. - Reassured by clear, visual numbers instead of guesswork. - More in control of the situation.	- Empowered by a clear, professional negotiation letter. - Nervous about actually contacting the lender. - Confident and ready to act.

Process Ownership <i>Who is in the lead on this?</i>	• Backend team — Auth & Loan APIs (FastAPI, SQLAlchemy).	• Backend team — Financial Service Engine (EMI/DTI/health scoring).	• AI integration team — Gemini negotiation service.
Opportunities <i>How can we improve this stage?</i>	• Allow document upload to auto-fill loan details. • Simplify onboarding to fewer required fields. • Add inline validation with helpful error messages.	• Add trend charts showing financial health over time. • Send proactive alerts when stress level rises. • Let borrowers set a savings/repayment goal.	• Support multiple negotiation letter tones per lender. • Add lender-specific letter templates. • Track whether a lender accepted, countered, or rejected a settlement.
