

Project Executable Files

Date	13 July 2026
Team ID	N/A
Project Name	AI Powered Debt Relief & Financial Recovery Platform
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Yes
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	N/A (SQLite auto-created via SQLAlchemy models; no
4	Database schema / seed files (if applicable)	Yes
5	Environment configuration file (.env.example or similar)	N/A (not deployed to a public host for this submission)
6	Deployed application URL (if hosted)	N/A (web app, no APK/binary)
7	APK / Executable binary (if applicable for mobile/desktop apps)	N/A (not containerized)
8	Dockerfile / Containerization config (if applicable)	Yes (manual end-to-end API smoke test: register, login, add loan, analyze, generate letter)
9	Test files and test results	N/A (no demo video required)
10	Demo video or walkthrough (if required)	

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

/debt-relief-platform /backend - FastAPI app
 (main.py, database.py, models.py, schemas.py, auth.py, financial_engine.py,
 gemini_service.py, requirements.txt, .env.example)

/backend/routers - auth_router.py, loans_router.py, financial_router.py,
 negotiation_router.py /frontend - React + Vite app
 (src/App.jsx, src/AuthContext.jsx, src/main.jsx, src/api, src/pages,
 package.json, vite.config.js, index.html)

README.md - setup and run instructions for both servers

Step 3: Deployment / Access Details

Field	Not deployed to a public host for this submission - run locally per README
Hosted / Deployed URL	Register a new account via the /register page (no seeded demo account) - full sign-up takes under a minute.
Login Credentials (Demo)	N/A - run locally (uvicorn + Vite dev server); no cloud hosting provider used.
Platform / Hosting Provider	<a href="https://github.com/<team-repo>/debt-relief-platform">https://github.com/<team-repo>/debt-relief-platform (team lead to add the actual link).
Repository Link	N/A - not recorded for this submission.
Demo Video Link	

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Pre-requisites: Python 3.8+ (tested on 3.12), Node.js 18+, npm, and (optionally) a Google Gemini API key

Step 1: Clone the repository: `git clone <repo-url> && cd debt-relief-platform.`

Step 2: Backend setup: `cd backend, python -m venv venv, activate it, pip install -r requirements.txt.`

Step 3: Configure environment: copy `.env.example` to `.env` and set `JWT_SECRET_KEY` (and `GEMINI_API_KEY` if available - the app falls back to rule-based letters without it).

Step 4: Start the backend: `uvicorn main:app --reload` (serves on `http://127.0.0.1:8000`).

Step 5: Frontend setup: in a new terminal, `cd frontend, npm install, npm run dev.`

Step 6: Open the browser at the Vite dev URL (typically `http://localhost:5173`), register a new account and explore the dashboard.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	No admin/mentor role is implemented - only a single Borrower role exists.	Not required for current scope; access control is fully enforced per-user at the
2	SQLite is used instead of a production database.	Acceptable for demo/academic scale; DATABASE_URL is
3	Negotiation letters depend on the Gemini API for best quality output.	A deterministic rule-based fallback letter is generated automatically if
